What tables are there and how are they connected? Give me a short summary?

Genie

There is one table available: dbacademy_retail.v01.sales. This table contains information about sales transactions, including columns for customer_id, customer_name, product_name, order_date, product_category, product, and total_price. There are no explicit connections or relationships to other tables since only one table is provided.

Always review the accuracy of responses.
